Roofbond Mouldshield K

Heavy Duty Mould Killer for roofs.

Mouldshield K is a biocide recommended for treating contaminated surfaces such as asbestos roofs prior to recoating. It kills fungal and algal spoil on roofs. **Mouldshield K** will provide a barrier coat over the substrate. When coupled with in-can biocides it will provide maximum protection against against fungal and algal growth.

Mouldshield K contains a liquid blend of Benzalkonium Chloride and Phenyl Phenoxide. It is a very low toxicity bacterial, fungal and algal wash which will kill all film spoilage species.

Application Method: **MOULDSHIELD K**

Fungicidal wash.

STEPS:

Use at a dilution of 1 part **Mouldshield K** to 20 parts water, soak until the deposit has softened and allow to dry completely before coating, usually overnight.

Apply by broom or backpack pressure spray to surfaces. Improved results may be expected from longer contact times except on soft metals.

Notes:

- Before using this product consult the product MSDS
- Please see Roofbond, Stencilshield, Concreshield or Floorshield for application details
