## Naturapatch Coarse

**Flexible patching compound for fibre cement sheet joins before rendering**

Naturapatch Coarse is a fine sand compound that is used with a fibreglass tape (Naturatpe) To set joins on fibre cement sheeting such as Hardietex or similar.

Naturapatch Coarse is premixed and natural coloured and cannot be sanded. Please follow directions listed in application methods for Naturatex Alfresco textures to apply Naturapatch Coarse correctly.

Most joins set in one application with minimal shrinkage. A second coat is not normally required as a trowelled finish is normally applied to cover the entire surface.

Naturapatch Coarse is applied with a broad spatula over the join area or recessed section of the sheeting. Naturapatch Coarse can also be used to set corners flush over the trim beads and for small filling.
